---

In the following problems, you do not need to simplify your answers at all.

1. Compute the derivative of the following function, where  $A$  and  $B$  are constants.

$$g(x) = A \tan(4x) + B \sec(4x)$$

2. Find  $\frac{dh}{dx}$  for the following function.

$$h(x) = \sin\left(\frac{x}{x+3}\right)$$
