1. On a certain patch in Montana, a group of rabbits exist. The initial population is 100 rabbits and the number doubles every 200 days.
  - (a) Write down the general differential equation that represents exponential growth and decay.
  - (b) Using the solution of the differential equation, solve for how large the population will be after 100 days. Simplify your answer so that it is in terms of  $\sqrt{2}$ .
